

CARE PATHWAY FOR ALL PATIENTS WITH A TRACHEOSTOMY

This Care Pathway has been developed by a multidisciplinary team. It is intended as a guide to care and treatment, and an aid to documenting patient progress. The Care Pathway document is designed to replace the conventional nursing clinical record. All healthcare professionals are of course free to exercise their own professional judgement when using this care pathway. However if the Care Pathway is varied from for any reason, the reason for variation and subsequent action taken must be documented on the multidisciplinary progress notes.

All patients with an ALTERED AIRWAY will be nursed in designated ward areas across the Trust:

Head and Neck for surgical patients at WRH

Acute Respiratory Unit for respiratory patients at WRH

Ward 5 for patients at Alexandra Hospital

ALL CUFFED tracheostomy tubes should be managed at WRH on Head & Neck or ICU

For information regarding Tracheostomy training & competency please contact Emma Jameson Physio head and Neck Ext 39119 or Catherine Bell Head and Neck CNS Ext 39151

Any comments / problems in completing this pathway should contact Sister Donna Bagnall Critical Care Outreach Ext 39555 or Bleep 421/422

Approved at the Intensive Care Forum:

Review Date:

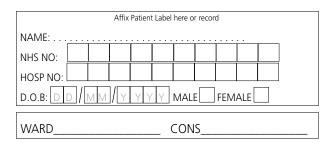

Approved by Medical Records Committee: 17/11/2008

Guidelines referred to when developing this care pathway:							
1. WAHT-CRI-001 Tracheostomy Guidelines							

Abbreviations used in Care Pathway							
RN	Registered Nurse	St N	Student Nurse				
HCA	Health Care Assistant	SLT	Speech and Language Therapist				
Dr	Doctor	RD	Registered Dietician				
PT	Physiotherapist	PH	Pharmacist				

Supporting Documentation

- Tracheostomy observation chart
- Tracheostomy Equipment Change Chart
- Tracheostomy Decannulation guidelines
- Altered Airways care for Registered Health Care Professionals

CARE PATHWAY FOR ALL PATIENTS WITH A TRACHEOSTOMY

All users of this pathway must enter their specimen signature and initials below										
Staff caring for the patient with a Tracheostomy should have successfully completed or be working towards completion of Altered Airways for Registered Healthcare Professionals, self-learning package-theory and practical assessments.										
NAME	SIGNATURE	INITIALS	DESIGNATION							

Affix Patient Label here or record									
NAME:									
NHS NO:									
HOSP NO:									
D.O.B: DD/MM/YYYY MALE FEMALE

WEANING / DECANNULATION GUIDELINES AND FLOWCHART	Y	N	N/A	Signature (Date where appropriate)
Is the long term goal for the patient to have the tracheostomy removed?				

If **YES** follow decannulation guidelines below.

If **NO / NOT KNOWN** give written reason:

(Please note weaning may still be appropriate e.g. Cuff deflation trial)

Following MDT discussion - Does the patient fit the criteria for Weaning.

4 or more of the below criteria

- RR < 25
- Fio2 < 40%
- SaO2 > 95%
- Effective cough
- Infrequent suction required
- Alert & cooperative

If Yes go to Tracheostomy Weaning

If No give written reason in multidisciplinary progress notes. Please make a daily entry of patient progress including the application of Decannulation Guidelines.

TRACHEOSTOMY WEANING	Date Commenced / Signature	Date Successful / Signature
STAGE 1: Cuff deflation trial:		
Monitor observations: NEWS, minimal suction requirements, maintain target SaO2, patient comfort.		
If successful cuff remains down for 30 mins or longer if tolerated, and monitor as above.		
If unsuccessful reinflate cuff and reassess daily if appropriate.		
Consider use of speaking valve if appropriate.		
STAGE 2: Cuff deflation daytime:		
Monitor observations, NEWS, minimal suction requirements, maintain target SaO2, patient comfort.		
If successful cuff remains down for daytime hours and monitor as above. Re-inflate cuff overnight.		
If unsuccessful re-inflate cuff and reassess if appropriate.		
Consider use of speaking valve if appropriate.		
STAGE 3: Cuff deflation 24 hours:		
Monitor observations: NEWS. Minimal suction requirements, maintain target SaO2, patient comfort.		
If successful cuff remains down for 24 hours or longer if tolerated, consider and monitor as above.		
If Unsuccessful re-inflate cuff and reassess daily if appropriate.		
Consider use of speaking valve if appropriate.		
Consider downsizing tube to aid weaning process (see below)
