## Guidelines for Registered Nurses Verification of an Expected Adult Death (RNVoEAD)

Department / Service:	Palliative & End of life care	
Originator:	Avril Adams Palliative Lead Nurse	
	Tess Makinson End of life care facilitator	
Accountable Director:	Pauline Gardner	
Approved by:	Haematology/Palliative Care Directorate Meeting 1 <sup>st</sup> May 2022, SCSD Governance Meeting	
Designation:	Chief Nurse	
Date of Approval:	25 <sup>th</sup> May 2022	
Review Date:	25 <sup>th</sup> May 2025	
This is the most current		
document and should be		
used until a revised		
version is in place		
Target Organisation(s)	Worcestershire Acute Hospitals NHS Trust	
Target Departments	All adult patient areas	
Target staff categories	Registered Nurses and medical staff	

#### Purpose of this document:

The words confirmation and verification are interchangeable. For clarity of the wording of this policy and for training purposes we will be using verification.

The aim of this policy is to ensure that expected adult deaths are verified by a competent Registered Nurse and comply with legal requirements.

Nurses undertaking this procedure must work within the accountability framework laid down by the Nursing and Midwifery Council in the NMC Code of Professional Conduct (NMC, 2018)

A nurse cannot legally certify death – this is one of the few activities required by law to be carried out by a registered medical practitioner. In the event of death, a Registered Nurse may confirm or verify that death has occurred, providing that there is an explicit local protocol in place to allow such an action. Nurses undertaking this responsibility must only do so providing they have received appropriate education and training and have been assessed as competent.

#### Key amendments to this Document:

### 1. Introduction

The aim of this policy and the accompanying procedure and competency assessment tool (see Appendix 2) is to provide a framework for the timely verification of expected adult deaths by experienced and assessed as competent Registered Nurses.<sup>2</sup>

It will enable staff to care appropriately for the deceased, in line with local policy, and minimise distress for families and carers following an expected death at any time of the day / night / week. It is in line with the person and family centred care recommended in national documents.<sup>3</sup>

Timely verification, within one hour of last breath sounds in a hospital setting,<sup>4</sup> is an important stage in the grieving process for relatives and carers and also a key time for support.

Families should be advised that there may be a difference between the times of the last breath and that which is recorded as the time of verification of death in the notes (the latter is viewed as the official time of death).

This guidance ensures that the death is dealt with:

- in line with the law and coroner requirements (See Appendix 1)
- in a timely sensitive and caring manner, respecting the dignity, religious and cultural needs of the patient and family members.
- It encourages the timely removal of the deceased to the mortuary / funeral directors.
- It also ensures the health and safety of others is protected, e.g. from infectious illness, radioactive implants and implantable devices.

#### 2. Scope of the Policy

**2.1** The term "expected death" is defined as 'the result of an acute or gradual deterioration in a patient's health status, usually due to advanced progressive incurable disease, which has been documented by a medical practitioner within the last two weeks.' <sup>4</sup>

**2.2** The term "adult" is defined as a person 18 years of age or older.

**2.3** Only a registered medical practitioner may **certify** a patient's death.

**2.4** In the absence of a medical practitioner designated Registered Nurses can **verify** the fact of an expected death.

**2.5** The aim of this policy is to ensure that expected adult deaths are confirmed by a competent Registered nurse and comply with legal requirements. For the purpose of this policy a Registered Nurse is a person who holds current nursing registration with the United Kingdom regulatory authority for nursing and midwifery, the Nursing and Midwifery Council (NMC).

Guidelines for Registered Nurses Verification of an Expected Adult Death		
WAHT-CG-681	Page 2 of 18	Version 3

**2.6** Nurses may only verify death on adult patients who have been previously identified as being expected to die by medical staff and there is,

**2.6 (a)** clear agreement for Registered nurse verification of death (RNVoED) written in the medical notes, and/or

**2.6 (b)** that the doctor will be available when informed of the death to confirm that a trained and competent RN can verify the death as it is expected, and /or

**2.6 (c)** there is a completed and current Individualised Last days of life care plan for Adults WR5313 in the patient case notes.

**2.7** The patient must also be recorded as not for cardio-pulmonary resuscitation in the medical notes using an appropriate form, signed in line with current guidance.<sup>5</sup>

**2.8** Worcestershire Acute Hospitals NHS Trust has agreed that Registered nurses may verify an expected death following training, assessment and sign off of relevant competencies.

#### 3. Responsibilities<sup>4789</sup>

Medical:

- A DNACPR decision is documented.
- Whilst it is good practice that doctors document in the patient's clinical record that a Registered Nurse can verify the death, this is not essential.
- The doctor will be available (when informed of the death) to confirm that a competent nurse can verify the death as it is expected, which may be evidenced by the use of an Individualised Last Days of life Care plan for Adults WR5313
- The doctor will be available if necessary to speak to families after the death of the patient. This should be arranged at the soonest mutually convenient time.
- The responsible doctor (or if necessary a delegated doctor) will always explain
  / be available to explain the cause of death they have written on the medical
  certificate.<sup>6</sup>

#### Nursing

- All Registered Nurse verifying death must have read and understood the 2<sup>nd</sup> Edition of Care after death: Registered Nurse Verification of Expected Adult Death, (RNVoEAD) guidance(2019) and WAHT-CG-681 policy and received appropriate training and be deemed competent.<sup>4</sup>
- The Registered Nurse carrying out this procedure must inform the doctor of the patient's death (both in and out of hours) using agreed local systems and document the date and time this was carried out in the clinical record.
- The Registered Nurse carrying out the procedure must notify the mortuary/ funeral director of any infections, radioactive implants, implantable devices and whether an implantable cardio-defibrillator is still active. <sup>78</sup>
- It is the right of the verifying nurse to refuse to verify death and to request the attendance of the responsible doctor / police if there is any unusual situation.

Guidelines for Registered Nurses Verification of an Expected Adult Death		
WAHT-CG-681	Page 3 of 18	Version 3

### 4. Policy Detail

All expected deaths verified by Registered Nurses should conform to procedure protocol – see Appendix 2.

#### 5. Implementation of Key Document

#### Plan for Implementation and dissemination

The Professional Development lead will oversee the effective communication of the approved policy to all relevant staff. This includes emailing copies of the policy to the Matrons so that they may discuss in ward and department meetings, as well as to key heads of service who are involved. Matrons are responsible for circulating details of the policy to ward and department managers, who are then responsible for notifying ward and department healthcare workers. The policy is accessible via Key Documents on the Trust Intranet.

Staff may print key documents at need but must be aware that these are only valid on the day of printing and must refer to the Intranet for the latest version. Hard copies must not be stored for local use as this undermines the effectiveness of an intranet-based system.

Individual members of staff have a responsibility to ensure they are familiar with all key documents that impinge on their work and will ensure that they are working with the current version of a key document. Therefore, the Intranet must be the first place that staff look for a key document.

Line managers are responsible for ensuring that a system is in place for their area of responsibility that keeps staff up to date with new key documents and policy changes.

#### 6. Training and awareness

It is the responsibility of the individual professional to ensure that they are aware of the contents of this policy. It is the responsibility of matrons to identify any training needs and to release relevant staff for training. Nurses undertaking this role must only do so providing they have received appropriate education and training and have been assessed as competent. Nurses must retain records of competence within their personal portfolio and send a copy to training and development so that a central record of competence can be maintained.

Competence may be assessed by a registered medical or non- medical practitioner already competent in the skill, using the agreed competency document (Appendix 3). Competence must be reviewed annually as part of the Trust personal development review process.

#### 7. Monitoring and compliance

Ward managers/Senior nurses are responsible for monitoring compliance with this policy by ensuring that:

- Only Registered Nurses who have received training and have been assessed as competent are performing this role.
- Competence is reviewed annually as part the personal review process.
- Initial 6 month audit then annual audit to review notes across all sites to review compliance with policy and training competencies to be registered and undertaken by EOLC facilitators.

Guidelines for Registered Nurses Verification of an Expected Adult Death		
WAHT-CG-681	Page 4 of 18	Version 3

Worcestershire Acute Hospitals

It is the responsibility of the individual undertaking this role to ensure that they comply with the policy.

### 8. Policy Review

The policy will be reviewed after two years by the Palliative and end of life care team and professional development.

#### 10. Background

#### **10.1 Equality requirements**

The content of this policy has no adverse effect on equality and diversity – see supporting document 2.

#### **10.2 Financial Risk Assessment**

There are no financial risks associated with this policy - see supporting document 3

#### **10.3 Consultation Process**

Senior nursing and medical staff have been consulted - see supporting document 1

#### **10.4 Approval Process**

This document will be reviewed and approved by the Patient Safety and Quality Committee prior to publication.

Guidelines for Registered Nurses Verification of an Expected Adult Death		
WAHT-CG-681	Page 6 of 18	Version 3

#### Appendix 1~ Deaths requiring coronial investigation <sup>10, 11</sup>

A coroner is a judicial office holder who must investigate a death when they have reason to suspect that:

- the deceased died a violent or unnatural death,
- the cause of the death is unknown, or
- the deceased died while in custody or state detention.

A coroner investigates a death to ascertain who the deceased was; how, when and where the deceased came by his or her death; and the particulars (if any) required to register the death.

The Chief Coroner has set out the coroner's two main purposes in investigating deaths:

- to explain the unexplained, both for the benefit of the family and for the public at large; and
- to report, where appropriate, with a view to preventing future deaths.

#### Referrals to Coroner's office

 $\hfill\square$  The cause of death is unknown.

□ There is no attending practitioner(s) or the attending practitioner(s) are unavailable within a prescribed period.

 $\hfill\square$  The death may have been caused by violence, trauma, or physical injury, whether intentional or otherwise.

- $\hfill\square$  The death may have been caused by poisoning.
- □ The death may be the result of intentional self-harm.
- □ The death may be the result of neglect or failure of care.
- $\hfill\square$  The death may be related to a medical procedure or treatment.

 $\hfill\square$  The death may be due to an injury or disease received in the course of employment or industrial poisoning.

 $\hfill\square$  The death occurred while the deceased was in custody or state detention, whatever the death.

More detailed information is available from the Ministry of Justice publication, 'Guide to coroner services'.  $^{10}\,$ 

Guidelines for Registered Nurses Verification of an Expected Adult Death		
WAHT-CG-681	Page 7 of 18	Version 3

Version 3

#### Appendix 2

#### Procedure for the verification of an expected adult death by Registered Nurses (RN).

Equipment

- Pen torch
- Stethoscope

WAHT-CG-681

• Watch with a second hand or mobile phone

Verification of expected death will require the nurse to assess the patient for a minimum of Five (5) minutes to establish that irreversible cardio pulmonary respiratory arrest has occurred, as well as specific additional observations.<sup>6</sup>

Any spontaneous return of cardiac or respiratory activity during this period of observation should prompt further five minutes observations.

Action	Rationale		
The RN must notify the doctor of the death (including date / time)	To ensure consistent communication		
Check written notes that a registered medical practitioner has authorised RN verification of expected adult death, or gain confirmation from a medical practitioner,and that a DNACPR form is in place.	To ensure agreement of process.		
Check that the NHS number of patient's clinical records and deceased correlate and patient is identified correctly with identity band – name, date of birth, address or NHS number and that there are two identity name bands in situ.	To correctly identify deceased		
Instigate process for deactivation of implantable cardiac defibrillator (ICD) if not already deactivated.	To ensure the timely deactivation of ICD		
Adopt standard infection prevention precautions, and where indicated due to risk of infection adopt contact or respiratory precautions.	To ensure protection of RN.		
Lie the patient flat. Leave all tubes, lines, drains, medication patches and pumps, etc in situ.	To ensure the patient is flat ahead of rigor mortis, and all treatments are in situ ahead of verifying death		
<ul> <li>The nurse verifying death should observe the patient for a minimum of five minutes to establish that irreversible cardio respiratory arrest has occurred, to include,</li> <li>Cessation of the circulatory system, ie no carotid (or central) pulse for at least one full minute.</li> <li>Listen to heart sounds with a stethoscope for at least one full minute.</li> </ul>	<ul> <li>The absence of mechanical cardiac function is confirmed using a combination of the following: <ul> <li>The absence of a central pulse on palpation</li> <li>The absence of heart sounds on auscultation (Academy of Medical Royal Colleges 2008)</li> </ul> </li> </ul>		
	/erification of an Expected Adult Death		
	Namelan O		

Page 8 of 18

Trust Policy		Worcestershire Acute Hospitals NHS Trust
	To er	nsure there are no signs of cardiac output
<ul> <li>Cessation of respiratory system, id no respiratory effort or no breath sounds.</li> </ul>	anterior be used	he stethoscope on the patient's chest wall (the bell or diaphragm may ) and listen for breath sounds over ng for one minute
Verified by listening for at least one full minute.		ure there are no visible respirations. respirations indicate the patient is breathing.
Assessment of cessation of central pulse cessation of heart sounds and cessation o respiratory effort should total five minutes	f	
Cessation of cerebral function. Check that both pupils are fixed (not reacting to light of to any other stimulus) and dilated using a pen torch or ophthalmoscope.	or pupil or	ure there is no cerebral activity. Any r eye movements indicate the patient mains having cerebral function.
No reaction to trapezius squeeze.	ר ا	Fo ensure no cerebral activity.
The RN verifying the death needs to complete the verification of death documentation in the clinical notes. Time of death is recorded as when verification of death is completed (ie not when death was first reported)	require	ible documentation and legal ments.
The RN verifying the death must acknowledge the emotional impact of the death and ensure the bereaved family and friends are offered written information about "the next steps".	this diffi	re the family are supported during cult time.

Auditing and monitoring

RN's will be given competency booklets on training. These are to be completed and signed off by ward based mentors. Competency statement in booklet to be scanned and sent to EOLC trainer and WAHT training team.

RNs will be expected to update competency by reflection on practice annually and keep this in their portfolio.

Evidence of audit – both organisational in terms of the processes of care after death including RNVoEAD,

Assessor guidance:

• The competencies are a mixture of practical skills and knowledge and understanding.

• All criteria must be achieved during training to achieve competency ahead of two clinical observations.

• Registered nurses (RNs) will self-assess at the completion of the two observed clinical practice that they feel competent to perform this skill independently and evidence of mentor observed sessions.

• It is recommended that RNs reflect on this skill within their clinical practice at least annually during the appraisal process.

#### **1. Equality Statement**

1.1. All public bodies have a statutory duty under the Equality Act 2010 to set out arrangements to assess and consult on how their policies and functions impact on the 9 protected characteristics: Age; Disability; Gender Reassignment; Marriage & Civil Partnership; Pregnancy & Maternity; Race; Religion & Belief; Sex; Sexual Orientation

1.2. Our Organisations will challenge discrimination, promote equality, respect human rights, and aims to design and implement services, policies and measures that meet the diverse needs of our service, and population, ensuring that none are placed at a disadvantage over others.1.3. All staff are expected to deliver services and provide services and care in a manner which respects the individuality of service users, patients, carer's etc, and as such treat them and members of the workforce respectfully, paying due regard to the 9 protected characteristics.
